Enfotec Launches Next-Generation Linux-Based Integrated Security Appliances

Vienna, VA, March 4, 2005 -- Netfran Development Corp. (OTC Bulletin Board: NFDV), which is undergoing a name change to Ariel Way, Inc., and its subsidiary, Enfotec, Inc., a global provider of scalable Linux-based, Unified Threat Management security appliance solutions, formally introduced the launching of the company's newest generation of EN and CSA product lines enabling organizations of any size the ability to install Linux-driven, hardware-based firewall, Virtual Private Network (VPN), intrusion prevention and anti-virus capabilities in a single, manageable, high performance appliance.

Bob Bova, CEO of Enfotec, said, "The response Enfotec and our products have had in the marketplace has been extraordinary. Our potential customers are now seriously looking at developing and controlling their own cryptography. Enfotec continues to improve its Linux-based, secure hardware platform that allows for integration of today's most sought-after security requirements without the limitation of a proprietary, non-upgradeable platform and with superior bus utilization factors. We believe that the price/performance, scalability and flexibility of the technology are unmatched in the industry."

Arne Dunhem, CEO and Chairman of Ariel Way, said, "Our ability to offer cutting-edge secure global communications solutions needs to be supported by forward-thinking technologies. Enfotec provides the open system-based technology that many technologists firmly believe is the future of security."

Enfotec differentiates itself from other security appliances that require proprietary, expensive specialized semiconductor chips (ASICs), operating systems and buses. Instead, Enfotec designed firmware technology that utilizes standard off-the-shelf components combined with a Linux operating system. This provides customers with performance levels never before realized in a non-proprietary, cost-effective, hardware-based security appliance.

The Enfotec Customizable Security Appliance (CSA) product line enables integration of custom cryptographic algorithms in the same hardware architecture. Many financial institutions and federal government agencies are developing their own custom algorithms

but have had an impossible task in finding an executable hardware platform. Enfotec offers all the benefits of a standard EN product (Firewall, Intrusion Prevention) while integrating custom cryptographic algorithms as customers' requirements become more sophisticated.

The Enfotec EN Series has models that range from the EN5 to the EN500, which supports up to a gigabit of firewall performance while simultaneously supporting 500Mb/s of true 3DES-CBC VPN encryption. These performance benchmarks are achieved in standard PC-based hardware by utilizing Enfotec's patent-pending technologies: Chain Packet Processing (CPP™) and Packet Signature Recognition (PSR™). CPP™ enables standard PCI bus utilization up to 97% versus the 40% that is seen in the industry. PSR™ is a firmware algorithm that can check packet signature patterns at gigabit speeds. These technologies utilize other Enfotec firmware based intellectual property that can actually be upgraded in the same chassis. New Crypto algorithms, drivers, software upgrades and security options (dual hard drives, solid state drives, hardware dongle support) can all be integrated into the same chassis. The company believes that this type of investment protection is currently not available in proprietary security appliances. The current product lines are shipping today.

About Ariel Way, Inc.

Ariel Way is a technology and services company providing highly secure global communications solutions. The company is focused on developing innovative and secure technologies, acquiring and growing advanced emerging technology companies and national and global communications service providers. The company also intends to create strategic alliances with companies with complementary product solutions and services. The technology development effort for highly secure communications solutions is conducted by a wholly owned subsidiary, Enfotec, Inc. More information about Ariel Way can be found on the web at <http://www.arielway.com>.

Enfotec, Inc. designs, manufactures and markets high-speed security appliance solutions that integrate a high-performance Virtual Private Network (VPN) with a firewall, intrusion detection capabilities, anti-virus and security management in a single network appliance. Enfotec's EN Security Appliance and Custom Security Appliance products feature hardware-based technologies that the company believes delivers true wire-line data speed performance and the highest level of security achievable. The Enfotec EN series of products is scalable while being easy to configure and manage and enables third party software applications to be easily integrated. Enfotec's firmware and software technologies use standard off-the-shelf components combined with the Linux operating system to provide customers performance levels that the company believes have never before been realized in a non-proprietary, cost-effective, hardware-based security appliance. More information about Enfotec can be found on the web at <http://www.enfotec.net>.
